

APG Vasario Cash Drawer Installation Guide

This guide will walk you through connecting the APG Vasario Cash Drawer to an Altametrics e*Smart All-in-One Station.

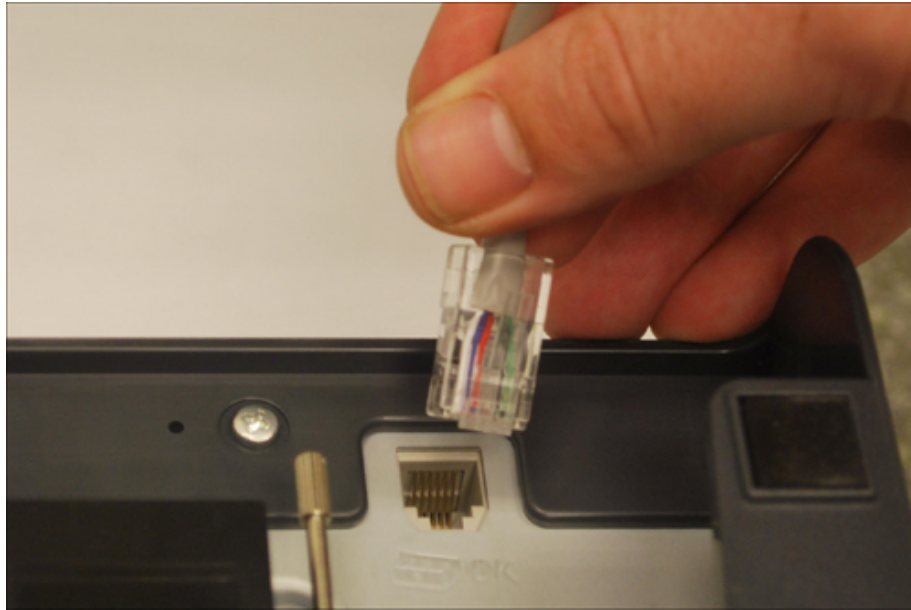

1. Connect the included RJ-11 cable, similar to a standard phone cable, into the port provided on the bottom of your cash drawer.

2. If your **S-Line** Series POS station comes with a built-in receipt printer in the base of the computer, you will find a small black cable coming from the back of the computer with a connector similar to a phone jack; plug the other end of the RJ-11 cable into this port.

If you are using a separate receipt printer, then connect the other end of the RJ-11 cable into the **DK** port located on the bottom of the printer. **Note:** If you have not done so already, follow the instructions in the **Printer Installation Guide** to first connect your separate receipt printer.

3. Your cash drawer is now physically connected to the station. For instructions on enabling and configuring the cash drawer in the HulaPOS software, please refer to our **Getting Started Guide**.
